

GARRY SINGH PMP, CSM

Senior Project Manager | Agile & Risk Management | Digital Transformation

Brampton, Ontario, Canada | Open to Senior / IT Project Management Roles

garrysinghpm@gmail.com | linkedin.com/in/garry-singh-a317a4266 | garrysinghpm.github.io

PROFESSIONAL SUMMARY

Senior Project Manager with a career built across technical support, business analysis, and enterprise technology delivery. Experienced managing IT initiatives end-to-end — from business problem identification through requirements, planning, development, testing, implementation, and closure — with strong command of stakeholder management, risk and change management, and Agile/Waterfall delivery.

Proven track record leading digital transformation initiatives spanning AI-enabled automation, CRM, data unification and MDM, and large-scale data migration across fintech, insurance, retail, and telecom.

Hands-on experience administering Jira and Jira Service Management, including custom workflow configuration, automation rules, and dashboards/reporting that give delivery teams and stakeholders real-time visibility into progress.

10+ yrs in IT · 5+ yrs in project management · PMP & CSM certified · Fintech, insurance, retail & telecom

CERTIFICATIONS & EDUCATION

Project Management Professional (PMP)

Certified ScrumMaster (CSM)

Bachelor of Science

Punjabi University, Patiala, India

May 2013 – May 2016

HOW I APPROACH A PROJECT

- **Align before you build** — get stakeholder sign-off on scope and risk before development starts.
- **Scope for the size of the problem** — compare cost and timeline before committing to the biggest build.
- **Trace it to the edges** — check every downstream system connected to a change, not just the obvious fields.
- **Report status, not noise** — give steering committees a clear view of what's validated versus pending.

CORE COMPETENCIES

- Project Management
- Stakeholder Management
- Risk Management
- Change Management
- Agile Project Management / Scrum
- Scrum Master
- Digital Transformation
- Jira Administration & Workflow Configuration
- Jira Automation & Dashboards/Reporting
- Requirements Gathering & Analysis
- SDLC & PMLC
- Project Planning & Scheduling
- Scope Management
- Business Process Mapping
- Gap Analysis
- BRD / FRD
- User Stories & Acceptance Criteria
- UAT & Test Coordination
- AI & Automation
- RPA
- CRM Solutions
- Data Migration & Validation
- Data Unification & MDM
- Process Improvement
- Jira Service Management (JSM) & Confluence

PROFESSIONAL EXPERIENCE

SENIOR PROJECT MANAGER

Rogers Communications — Brampton, Canada

Mar 2024 – Present

- Lead IT and transformation projects end to end — from business problem through requirements, delivery, and closure.
- Define scope and success criteria with stakeholders and delivery teams; manage schedule, risk, issues, dependencies, and change.
- Administer Jira and Jira Service Management — configuring custom workflows, automation rules, permissions, and dashboards/reports to give delivery teams and stakeholders real-time visibility into progress and blockers.
- Serve as Scrum Master on selected Agile projects — facilitating ceremonies, removing impediments, and coaching teams.
- Act as Change Manager on selected initiatives — impact assessment, communications, training, and adoption.
- Report status, risks, and decisions to senior stakeholders and steering committees.

What I've Delivered

Customer 360 CRM Migration — Rogers Communications

Mar 2024 – Present

Problem: After a merger, customer records at Rogers were held in separate systems with no single customer view. Leadership favoured a big-bang migration despite the validation exposure.

Solution: Led a phased four-wave data unification effort into a single CRM, using Master Data Management (MDM) practices — matching, deduplication, and reconciliation — to create one trusted customer record. Used the triple constraint to win unanimous Steering Committee approval for phased waves over a big-bang cutover. Tailored communication by seniority, ran mock migrations through change control, brought real end users into UAT and training, and had Finance validate accuracy in a parallel run before go-live.

Goal: Wave 1 went live in 2026 within budget. Data issues were caught in mock migrations before any real customer was affected, and the go-live retrospective produced two permanent process changes for the remaining waves.

PROJECT MANAGER

Jan 2023 – Feb 2024

Loblaw Companies Limited — Brampton, Canada

- Managed IT initiatives from problem identification and requirements through delivery and closure.
- Worked with stakeholders, developers, and QA to define scope, requirements, priorities, and deliverables.
- Developed BRDs, FRDs, user stories, acceptance criteria, process flows, UAT plans, and status reports.
- Administered Jira and Jira Service Management for delivery teams — building custom workflows, automation rules, and dashboards/reports to track sprint progress, ticket status, and stakeholder-facing metrics.
- Coordinated Agile delivery — sprint planning, backlog refinement, reviews, retrospectives; Scrum Master duties from Oct 2023.
- Led digital transformation initiatives involving AI, automation, customer platforms, CRM, and data migration.

Invoice Processing Automation (RPA) — Loblaw Companies

Jan 2023 – Feb 2024

Problem: Finance and Accounts Payable staff were manually keying vendor invoice data, with pressure to build a full AI solution able to handle any invoice format.

Solution: An RPA solution that ingests invoice PDFs, extracts and validates the data, and posts it to the accounting system. Compared cost and timeline against the full-AI option and presented the trade-off to the Finance Lead.

Goal: Live in under five months versus 12+ for the alternative; a three-week pilot extension prevented a production data issue.

PROJECT MANAGER

Dec 2021 – Dec 2022

Punjab Insurance

- Managed IT initiatives from problem identification and requirements through delivery and closure, working with stakeholders, developers, and QA to define scope and priorities.
- Developed BRDs, FRDs, user stories, acceptance criteria, UAT plans, and status reports; managed schedule, risks, issues, and changes.

Insurance Policy Management Platform — Punjab Insurance

Dec 2021 – Dec 2022

Problem: Customer Service and Operations staff were absorbing significant time on routine policy changes, and the existing COTS platform could not support real-time coverage changes.

Solution: An internal dashboard for Customer Service and Operations to manage policies, nominees, beneficiaries, and benefits. Proposed automatic processing for simple changes with employee review for complex ones, instead of a costly custom build.

Goal: Approved in a single steering committee meeting and delivered within budget, with three initially resistant agents joining UAT.

PROJECT MANAGER (promoted from Business Analyst)

Dec 2020 – Nov 2021

Wealthsimple — Toronto, Canada

- Managed IT initiatives from problem identification and requirements through delivery and closure, working with stakeholders, developers, and QA to define scope and priorities.
- Developed BRDs, FRDs, user stories, acceptance criteria, UAT plans, and status reports; coordinated Agile sprint planning, refinement, and retrospectives.
- Took over the AI Client Onboarding Automation project after promotion, carrying business analysis responsibilities alongside delivery during the transition.

AI Client Onboarding Automation — Wealthsimple

Dec 2020 – Nov 2021

Problem: Clients applied digitally, but Operations staff reviewed and routed every application by hand. Compliance wanted more human escalation; Product wanted more AI autonomy.

Solution: An AI-assisted review and routing layer on the internal Operations platform, with low-confidence cases sent for manual review. Ran joint workshops with Operations, Compliance, Product, Risk, and Technology to agree risk tiers before development.

Goal: Processing time fell from 2–4 days to under 10 minutes, with zero routing findings in the first two quarters.

BUSINESS ANALYST

Sep 2019 – Nov 2020

Wealthsimple — Toronto, Canada

- Gathered and analyzed business and system requirements for technology initiatives.
- Created business requirements, functional requirements, user stories, acceptance criteria, process flows, and UAT scenarios.
- Performed gap analysis and identified opportunities to improve business processes.
- Supported application enhancements, testing, implementation, and post-production activities, including Agile sprint activities.
- Worked on the AI Client Onboarding Automation project as Business Analyst, then continued on it as Project Manager after promotion.

APPLICATION SUPPORT ANALYST

Aug 2018 – Aug 2019

Tech Mahindra — Mohali, Punjab, India

- Supported business applications and investigated application incidents, defects, and operational issues.
- Performed troubleshooting and root-cause analysis to identify recurring application and process issues.
- Assisted with requirements analysis for centralized customer information and CRM capabilities.

TECHNICAL SUPPORT ANALYST

Jun 2016 – Jul 2018

Tech Mahindra — Mohali, Punjab, India

- Supported business users across hardware, software, and application issues; performed root cause analysis on recurring problems and coordinated escalations.
- Participated in stakeholder discussions for application changes — documenting AS-IS and TO-BE processes and translating operational challenges into requirements.
